

SOFTWARE FOR PARAMETRIZATION OF STATIC METERS

The program is designed for static meters operation either with simple registers or with smart, programmable functions, performed by the ETD during their manufacturing (technological part) and through operational utilization of static meters. For programming there are used PCs (the ports COM, USB), where the optical head is connected for performance of serial two-way communication with ETD in accordance with IEC/EN 62056-21.

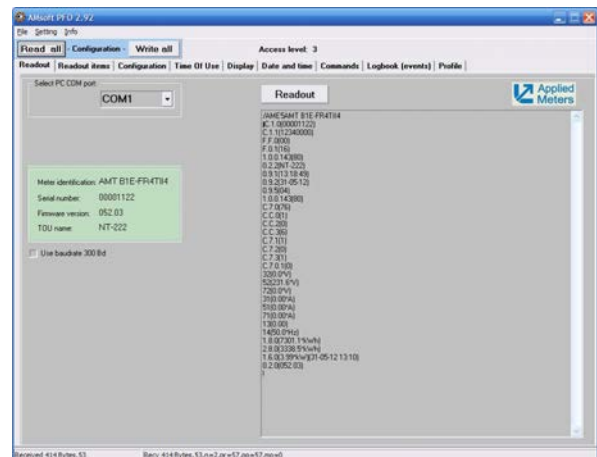

The program permits:

- Entry into the program using passwords (for different levels of access) and hardware keys;
- Setting of single and three phase electricity meters;
- Data readout and parameterization of electricity meters;
- Archiving read out data;
- Loading and saving parameter files;
- Possibility to use different language versions.
